SEEKING THE OPTIMAL CORPORATE PARTNER

Medscribe

A private medical context record for patients and families managing complex care.

WORKING PRODUCT ▪ PARTNER DISCUSSION ▪ OCTOBER 2026

THE PROBLEM

Caregivers must reconstruct care across visits, changes, and handoffs.

63 million family caregivers

Nearly one in four U.S. adults provided care for an adult or child with a complex condition or disability in the past year.

Visit information is scattered

Instructions, next steps, and documents are distributed across portals, paperwork, and conversations.

Plans change between encounters

Medications, schedules, and follow-up must remain current as care evolves.

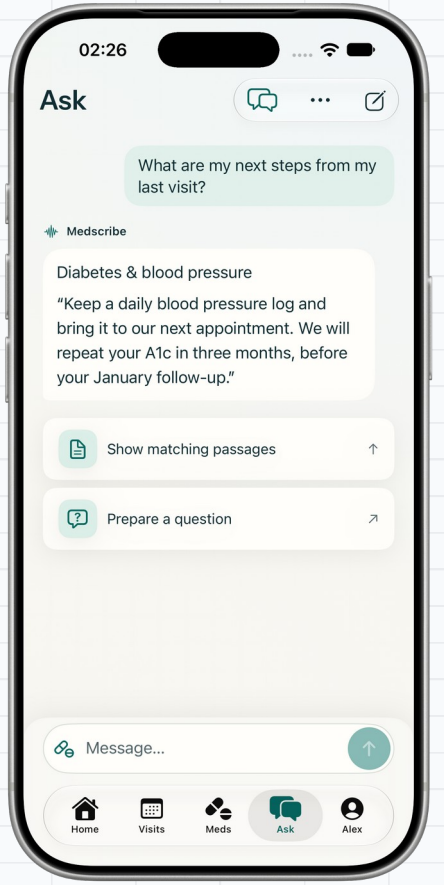

Handoffs lose critical context

Families need a current record they can share across caregivers and care settings.

SOURCE: AARP + NAC, CAREGIVING IN THE US 2025

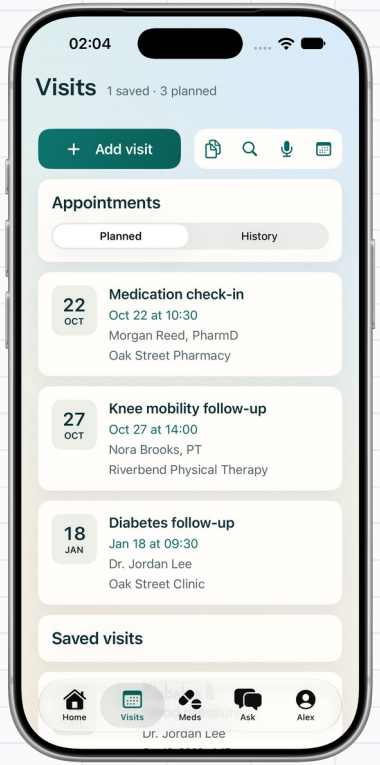

Useful answers, connected to the visit

Ask what changed, what to remember, or what to bring up next. Medscribe connects the answer to the patient's visits and medication record.

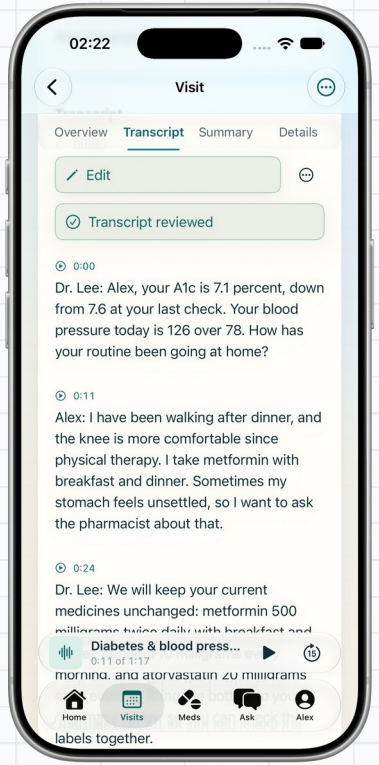

Public drug facts remain separate from what the clinician said.

Remember the visit

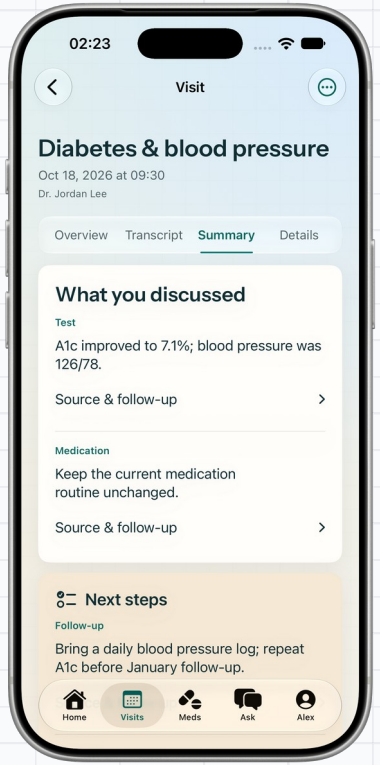

RECORD

Keep the conversation with everyone's permission

TRANSCRIBE

REVIEW

Check the summary and source-linked next steps

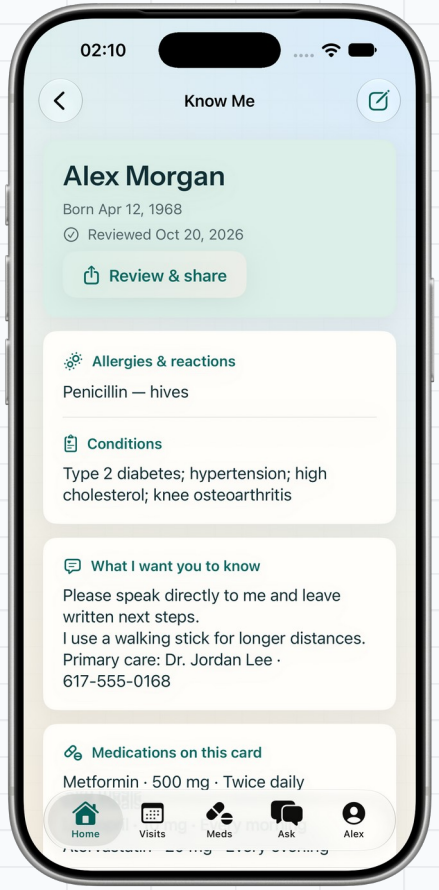

KNOW ME

The context a chart can miss

Help someone understand the person before they have to retell their whole history.

Usual baseline and communication needs.
Medications, allergies, and conditions.
The people to call and preferences that matter.

Review a readable card. Show it at the encounter, carry it on a companion, or share selected context privately.

Pick up since the last check-in

One briefing from the care updates the person chose to share.

What changed

Visit notes and medication records, alongside follow-ups, questions, and Know Me changes. Expand details and included source words.

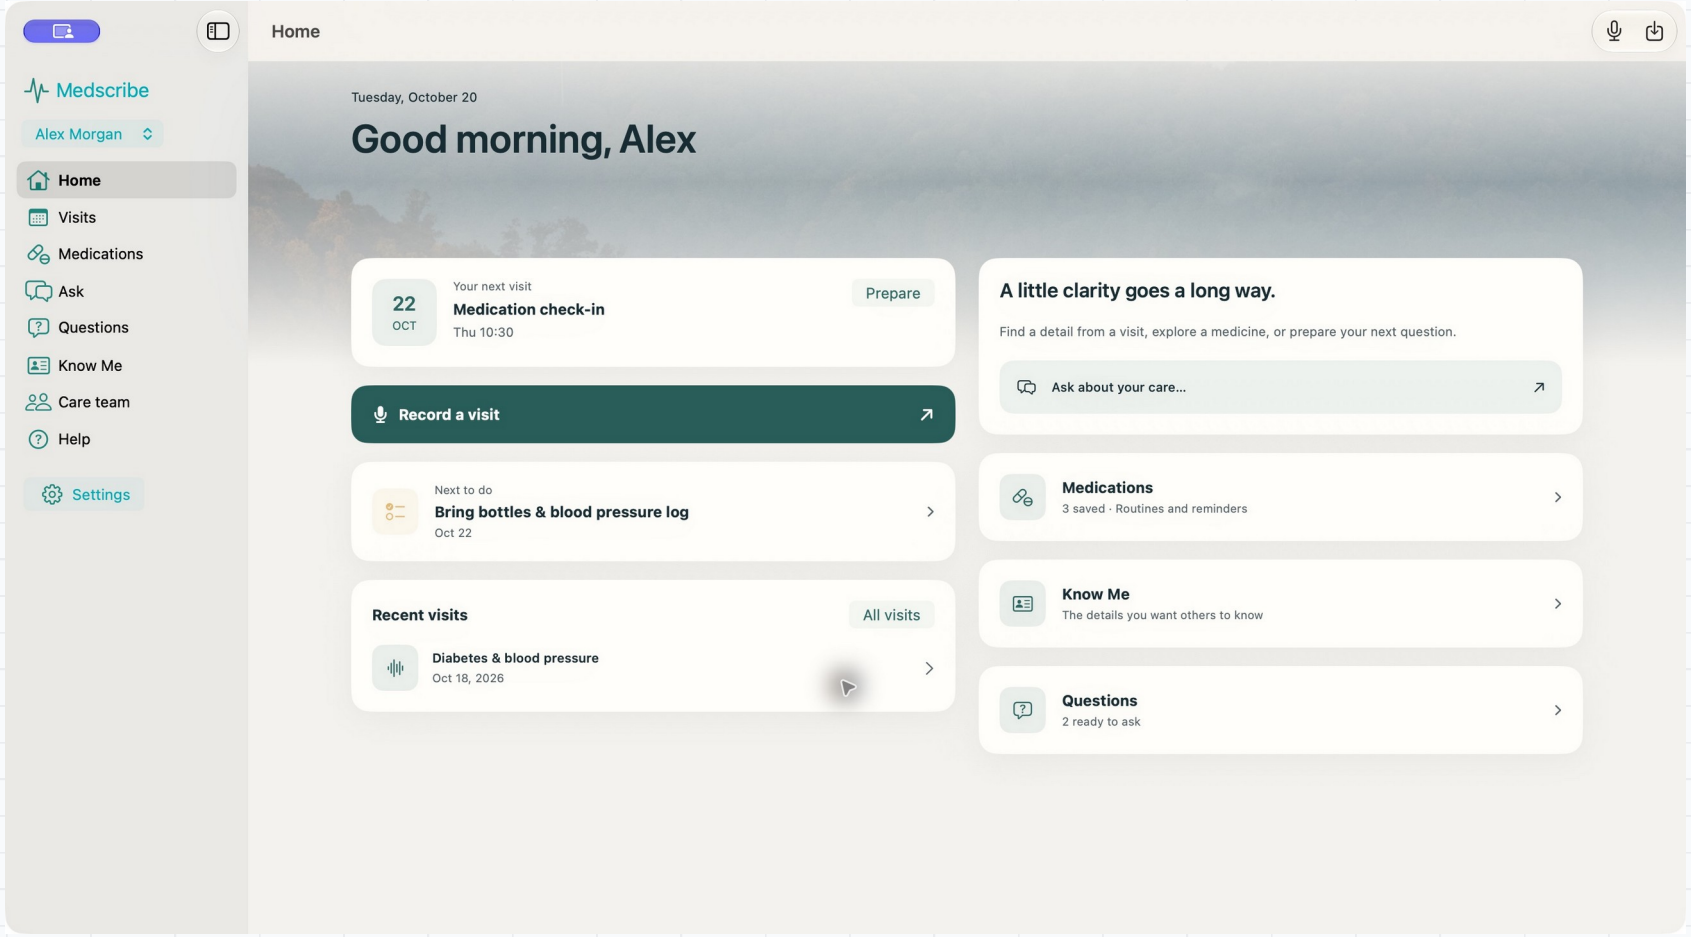

A deliberate check-in

“I’m caught up” saves a local review point. The next shared copy compares with it; simply opening a copy doesn’t mark it reviewed.

Optional encrypted snapshots · Selected information may be incomplete · Desktop exchange is manual

Medscribe on your desktop

Review care, prepare questions, and pick up where you left off.

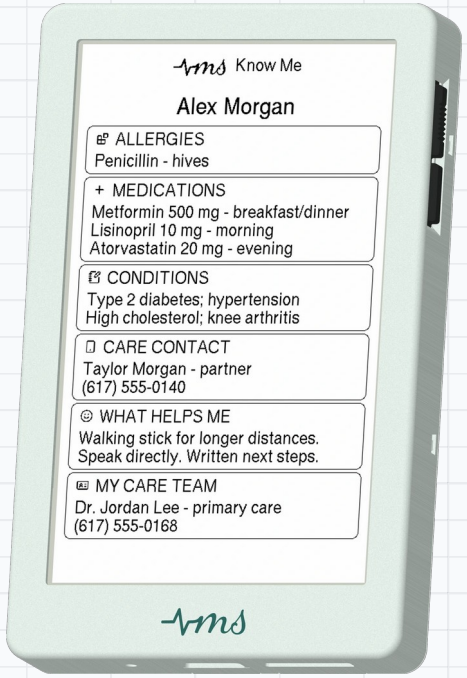

Familiar on every screen

Your visits, medication routines, and questions, with more room to review.

On-device AI. Encrypted sync by choice.

Hardware in development · Product renders

Keep Medscribe close

The companion

A quiet e-paper device for appointments and the care context you choose to carry.

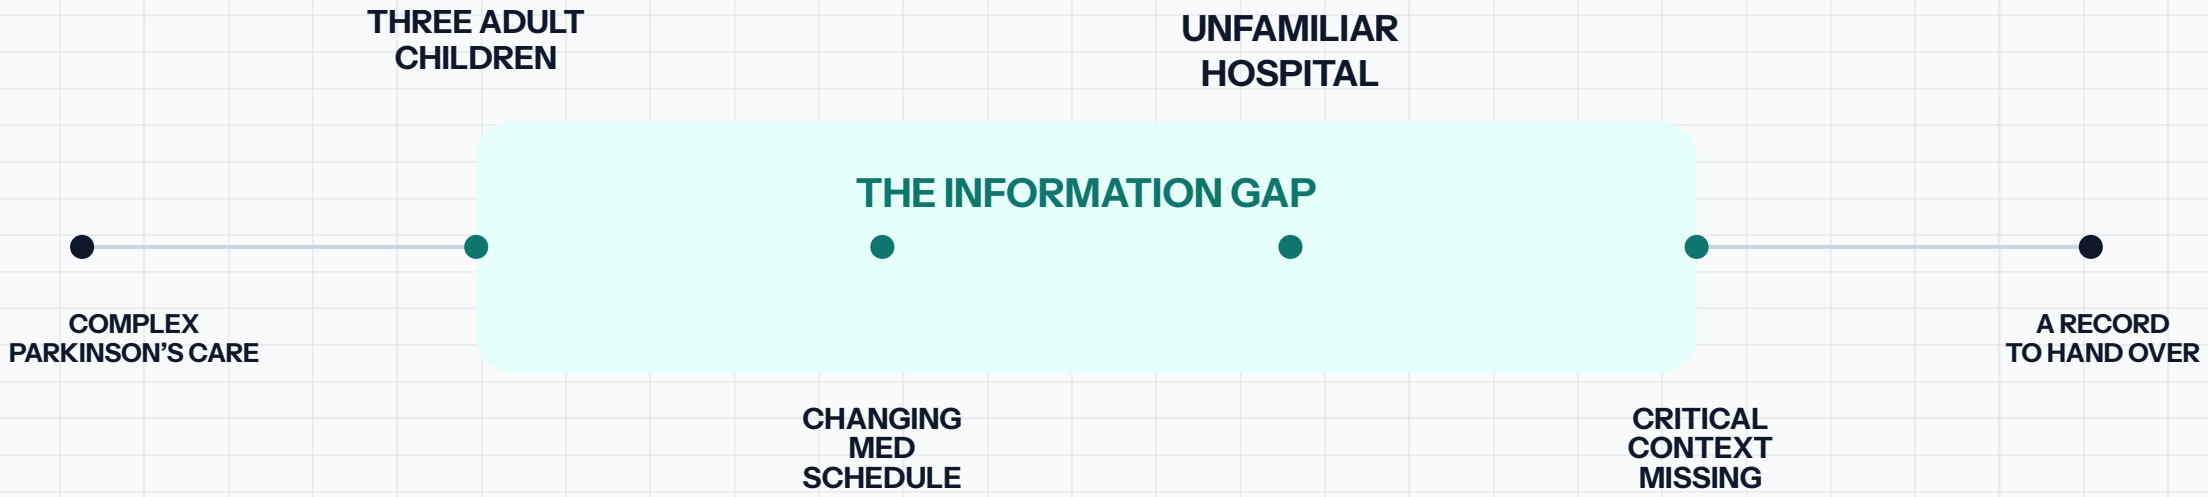

The pendant

A smaller, wearable way to keep your Know Me card close enough to show someone.

FOUNDER ORIGIN

Why I built Medscribe

That experience led me to build Medscribe: a current record any caregiver can hand over immediately.

The right corporate partner can bring Medscribe to market at scale.

Medscribe contributes

A working patient app, local AI integration, encrypted sharing, and continued product development.

The partner contributes

Brand, operating capabilities, market reach, and distribution.

A partner-branded offering

A patient and caregiver offering that could be adapted to the partner's brand and support model.

Flexible commercial structure

The final structure can reflect strategic fit, contributions, risk, and long-term value.

NEXT STEP

A focused product and partnership review

Evaluate product fit and a potential joint venture.

01

Product + IP

Walk through the current app, privacy architecture, and technical assets.

02

Strategic fit

Choose a caregiver use case, a bounded cohort, and clear learning goals.

03

Commercial structure

Discuss a potential joint venture and the structure best suited to the opportunity.
